

ADRA KIDS

Here I am in Samoa, visiting a village that was hit by a terrible tsunami. A tsunami is a powerful wave caused by a disturbance in the ocean, such as an

earthquake. Because the wave is so strong, it often doesn't stop on the beach but keeps going onto the land. It can cause a lot of damage to buildings and trees and, tragically, even hurt people. ADRA works hard to help people understand disasters like this so they can get away, and also helps them recover if it hits their village.

Do you know what I'm sitting in? It helped save the lives of two fishermen during the tsunami in Samoa because they held on to it very tightly. Connect the dots to see what it is. And visit www.adra.org.au to read their amazing story!
